

Minimize Touch Points to Build Tenant Confidence

EJCM is here to support commercial property owners and managers to make access points to common areas of buildings as “touch optional” as possible using the latest technology and products.

To help elevate the comfort level of your existing and future tenants, and address potential mandated compliance measures, EJCM offers no-cost building surveys from top to bottom.

We identify all access points that can be upgraded to “touch optional” – including; building entries and revolving doors, restroom doors and fixtures, access to amenity and conference center areas, and stairwells and elevators.

Based on upgradeable access points, we give you options for achieving “touch optional”, including a comprehensive shopping list with costs.

Sophisticated products:

- “Wave to Open” door operators
- Auto flush valves
- Anti-Microbial copper covers for elevator buttons
- Automatic revolving doors

Low-tech, low-cost products:

- Foot opener and closer for doors
- Biodegradable sanitary gloves or mitts dispensers
- Push safe pins and dispensers for elevator buttons

EJCM can help with tenant physical distance protocols – like repositioning of systems furniture, reconfiguration of shared spaces, safety screens for reception areas and guard stations, and touch optional suite entries.
